PREFACE TO THE FIRST EDITION

A new compilation of Recipes for American Iced Drinks has for some time been urgently called for owing to former publications being now out of print. It would have been possible to obtain from fresh sources various Recipes, but after consideration it was thought better to reproduce those of a well-known Expert whose knowledge and experience it was felt could not well be improved upon, and to whom due acknowledgments are hereby tendered.

To these are added some Recipes of Non-alcoholic Beverages which may be found useful by a considerable class of customers. We are indebted for these to the well-known firm of Messrs. W. J. Bush & Co., Ltd., Ash Grove, Hackney.

Additional Non-alcoholic Beverages.

NOTE.—*The following Recipes are those in general use, and make the highest class beverages. Taste, however, varies in different parts of the country, especially in regard to colour and acidity, and it would be impossible to give absolute directions to suit everybody. It must, therefore, be left to the judgment and skill of the manipulator to make such alterations as may be most suited to his trade.*

TO MAKE PLAIN SYRUP.

Take of finest refined sugar 6 lbs. ; add 2 pints of water. When all dissolved, gently boil for one minute ; withdraw the heat and remove the scum ; gently boil up again for another minute, and remove any further scum ; then add sufficient cold water to make 1 gallon (about 3 pints of water will be

COUNTER FOUNTAIN.

required). This produces a syrup equal to about 47 Twaddell, its specific gravity 1·235, and is the strength generally used by aerated water makers, and upon which the following recipes are based.

If a sugar be employed of such purity that no scum or only a small trace rise to the surface after boiling, then it is preferable not to boil the syrup, but simply to boil the water to destroy any germs that may be present, and then whilst hot add the sugar, and when dissolved the other ingredients.

In order to assist the solution of the 6 lbs. of sugar in the first 2 pints of water, a little heat may be used, not brought up to boiling point, but only until the sugar be dissolved.

Directions for Mixing.

While the syrup is still warm add the citric or tartaric acid, and when dissolved add the colouring (previously thinned if it be a thick colouring by mixing with two or three times its bulk of warm water). When the syrup has cooled, and is about lukewarm, add gradually the essence—stirring at the same time—then the French cream, preservative, and other ingredients.

These syrups are generally perfectly bright when made, but for various reasons they are sometimes cloudy after being mixed. When such is the case pass them through a filtering bag.

The quantity of flavoured syrup to be used is 1½ *ozs. to the* 10 *oz. bottle, and, of course, half the quantity for splits.*

Caution.—No matter how pressed the mineral water maker may be for the time, he must never bottle while the syrup is hot ; it should be quite cold.
